

INVITED SPEAKERS

Dr Mohan Raghavan is

an Emergency Physician and Clinical Toxicologist at Royal Perth Hospital, Perth Australia and WA Poisons information centre. His interest in toxicology includes medical education, research particularly in recreation drug abuse and new devices medical technology. He is a medical administrator and currently is Deputy Director of Clinical Services at Royal Perth Hospital. He also chairs various committees within safety and quality like RRAD (Recognising and Responding to Acute Deterioration) and DTC (Drugs and Therapeutics committee). He regularly travels to India and has facilitated in workshops and clinical tutorials.

Toxic case discussions from Australasia

Like many parts of Asia, Australasia presents a number of challenges to the poisoning/toxicology community whether that be the unusual toxinology, emerging patterns of substance use or complex pharmaceutical poisonings. The relatively isolated locations of some facilities can further compound these challenges.

During this session, a group of five expert clinical toxicologists, all currently active in clinical practice, will present and discuss poisoning challenging poisoning cases on behalf of TAPNA Inc. www.tapna.org.au, the representative body for the Australasian toxicology community. Cases will be presented by a facilitator with expert commentary/input from the panel with opportunities for audience participation also.

We look forward to some interesting case discussions at the congress and the opportunity to engage with our friends from Asia and other parts of the worldwide toxicology community.
